3. OPERATION DESCRIPTION

A. Set the microscope on a lever table.
B. Place the specimen on the center of the stage (6). If need, keep the specimen under the stage clips (5) to fix the objective.
C. Loosen the fastening knob (8) and move the head up or down until the specimen within the working distance, then tighten the fastening knob.
D. Observe through the right eyepiece (1) and slowly dual operates the focusing knob (7) to get a clear image. Then observe the left eyepiece (1), if the image is not clear, you should adjust the diopter (2) to get a clear one.
E. Rotating prism housing (3) to suit your interpupillary distance to obtain a crisp stereo image. Rotate the objective cover (4) to choose the 20X or 40X magnification.

Notice: Shut off the power supply when replace the bulb.
Objective must be within the working distance when using.
Turn off power switch when not in use.

4. OPERATION DESCRIPTION

Put the microscope in cool and dry place.
Cover it with the plastic dust cover when not in use. Check up and regularly grease the movable parts.
All the optic are adjusted and could take apart by yourself. When the lens and other optical parts covered with dust, you should wipe with volatile solvents or abrasive cleaners. Never wipe the surface of any optical with your hands.
Deliver to a professional shop for repair when not in use.
